

Communication system COFEM REMOTE

The Cofem Remote system of the Lyon Remote, Compact Lyon and Zafir algorithmic-addressable control panels allows them to be connected from anywhere, making it possible to change the configuration, view maintenance data and manage online.

Thus, the user can interact with the control panel during starting up and subsequently manage maintenance planning or provide online real-time support to customers from their offices or anywhere else by means of a tablet, smartphone or PC with internet access.

Distribution of elements in an installation

Remote Inbox: Remote Inbox: Mobile application compatible with iOS and Android devices, through which you can receive events (alarms, faults,...) produced in Cofem's remote control panels, through notifications and direct access to the panel. Thanks to this app, you will always be up to date with the status and operation of your fire control panel, in an easy and intuitive way.

NOTE: The functions offered in the product will depend on its version

Technical characteristics:

- View and act on the status of the control panel during the installation/starting up of the system.
- View and act on the status of the control panel in the customer's local network.
- View and act on the status of the control panel during maintenance.
- Management of events and alerts
