

I-LINK LITE

SOFTWARE FOR CONTROL PANEL SILVER

Configuration and management software for Silver control panels

I-LINK LITE is a PC software specifically designed for the configuration and management of conventional Silver control panels.

This system allows configuration through an intuitive graphical interface, facilitating the customization of the main functionalities of the control panels, and adapting to the particular needs of each installation.

FEATURES

- Compatibility with Windows operating systems.
- Advanced configuration of the main functionalities of the control panels.
- Customization of labels for zones and outputs.
- Programming of activation sequences of the main and logical outputs, adapted to different situations.
- Download and management of the control panel event history.
